Mellifluent User Flow

Home Screen

Enter valid search parameter (artist or song title)

→

Results Screen

Select desired result (results display songs followed by artist name)

Notice there is no "no results" page – Genius will find results no matter what.

How do I display a really long list of search results – continuous scrolling? Do we want it broken into pages? What is easiest to do in JS?

→

Lyrics Display (1)/Translation Selection

1) View original lyrics
2) Select translation language

→

Lyrics Display (2)

1) View original lyrics
2) View translated lyrics – line by line Comparison to original lyrics
3) Reset search button linking to home screen
